Profile

Highly skilled software developer with a strong focus on creating efficient, visually appealing, and user-centric web solutions. Proficient in technical documentation and dedicated to continuous professional growth through learning and adopting emerging technologies. Passionate about contributing to open-source initiatives and delivering innovative solutions that address complex challenges.

Work Experience

Project Head Moderator

Celo Academy   2022-2023

- Led to the development of an educational technical platform for CELO blockchain, which provides mobile based EVM solution, was responsible for managing about 100 people and making sure the quality of the technical content which was produced, responsible for having 22K+ unique visitors, 300K+ impressions on the platform
- As an experience of Head moderator learned the Team management skills

Social media manager

Securr   2023(Oct)-2024(May)

- Responsible for managing and creating content for social media platforms, focusing on Web3 security topics. Developed engaging campaigns to educate audiences, enhance brand visibility, and build a strong online presence.
- Working in a startup environment honed my ability to adapt quickly, meet tight deadlines, and deliver impactful content that resonates with the Web3 community.

Accomplishments

1)Won Bounties in several hackathons.
2)Gave a talk in university on Web3,Blockchain and decentralisation.
3)Played major role of being a mentor for university hackathon.

Projects

1)Movie Review Analysis- It used to fetch the user reviews and give the summary and also shows the graph, the USP of this project was that it was trained using authentic NLP practice, Designed and trained the model using custom bag-of-words techniques, ensuring accurate and authentic text analysis.(Was selected for getting presented at an technical fair)

2)AIRNft-Where a user can create an interactive NFTs.(Won a Bounty)

3)Trusted Sphere- Where a user can create and manage housing society maintenance system for any gated communities with the help of blockchain, payments in crypto and receipts in the form of NFTs(Won a bounty)

4)Asset vault- An app which helps to divide the pool of any crypto, useful for many DAOs.(Won a bounty)

5)Varnatva-Where users can comment on any website using the extension, and the each comment and the interaction with the comment like upvote/downvote and reports are stored on the blockchain, I have developed the extension also for the same, additional features with reputation tracking and reputation coloring , search comment option. - https://blockchain-comment.vercel.app/

6)College Dashboard for student profile- A project which stores all the data of students and also shows to the faculty , it was made using R technology
